boranacikbas@gmail.com +905353712766 Şişli/Istanbul, Türkiye

I am a third-year student in the Statistics Department at Yıldız Technical University. In these times when the value of data is understood more clearly, I am developing myself in the areas of correctly reading, analyzing, and presenting data. I am developing various projects and participating in competitions on data science, ML models, and the effective use of artificial intelligence tools. I have a particular interest in the finance and investment ecosystem and have directed my projects more towards these sectors. In line with my interest in entrepreneurship, artificial intelligence, and finance.

EXPERIENCES

Financial Production Controlling, BSH Ev Aletleri *Aug 2026 – Present*
Çerkezköy
I work as a project student at four different home appliance factories, handling production cost analyses for major appliances manufactured for the REM region market, investment and budget calculations for R&D and procurement activities, and the associated month-end reporting.

Intern, QNB 101 *Jan 2026 – Feb 2026*
Istanbul
I had the opportunity to listen to professionals explain the dynamics and workings of the banking sector, and the career events here had a great impact on my perspective and future plans.

Database Editor, Mackolik A.Ş. *Aug 2025 – Feb 2026*
Istanbul
I worked full-time alongside my studies in the data unit of Turkey's largest sports application. Here, I had the opportunity to enter a corporate work environment and work with real-life data.

Sales Consultant, CVS Health *May 2024 – Oct 2024*
Delaware, US
I participated in the Work and Travel program in the United States. During the summer, I developed strong language and intercultural communication skills.

EDUCATION

Yıldız Technical University, Statistics *Sep 2024 – Jun 2028*
Istanbul
GPA: 3.35/4.00

SKILLS

- Analytical Thinking
- Team Collaboration
- Effective Communication
- Entrepreneurial Mindset
- Problem Solving
- Time Management

PROJECTS

AI Financial Twin
With this project, we were selected as finalists in Garanti BBVA's 'FikirİnleParla' competition, reaching the top 3 out of 1280 teams. We developed an AI-based **Digital Financial Twin** model that analyzes users' past spending habits and financial data, offering them personalized budget management, savings scenarios, and spending forecasts. In the technical architecture, we created a hybrid model using the **Clustering (K-Means)** method and **LSTM time series**, and provided transparent explanations to the user with the help of Generative AI. We projected the project's contribution to the bank as an **18% reduction in NPL** rates.

TECHNICAL PROFICIENCIES

Languages — Python (Pandas, NumPy), SQL, DAX
Machine Learning — Supervised & Unsupervised Learning, Clustering, Statistical Modeling
Analytical Tools — MS Excel (PowerPivot) , SAP ERP, Power BI
